Available immediately · Open to full-time and part-time roles

Junior Software Engineer with production experience in backend and full-stack development. Contributed RESTful APIs (Django REST Framework, JWT, RBAC, PostgreSQL) to a medical research platform serving ~500 doctors, residents, mentors, and trainees as part of a multi-developer team, and independently shipped an AI-powered e-commerce platform with Stripe, CMS, and Row-Level Security. Strong ownership, clean architecture, and a bias toward shipping.

TECHNICAL SKILLS

Backend: Python, Django REST Framework, Node.js, REST APIs, JWT, PostgreSQL, SQL

Frontend: TypeScript, React, Next.js (SSR / Server Actions), Zustand, Tailwind CSS, Zod

Cloud & DevOps: AWS (SES, Serverless), Supabase, Vercel, Nginx, Docker, Git, CI/CD

Architecture: System Design, RBAC, Row-Level Security, API Documentation (OpenAPI), Microservices Patterns

PROFESSIONAL EXPERIENCE

Backend Developer — ShebaHub Medical Research Platform

2025 – Present

Production research collaboration platform serving ~500 doctors, residents, faculty mentors, and trainees across Israel's medical research community. Volunteered as part of the development team to support medical research and academic collaboration.

- Designed and developed RESTful backend APIs (Django REST Framework, PostgreSQL) for a production platform used daily by medical staff and students.
- Implemented authentication (JWT) and granular role-based access control (RBAC) across mentors, trainees, and admin users.
- Integrated AWS SES for automated platform-wide email notifications (verification, password reset, approvals, invitations).
- Collaborated with a multi-developer team on backend architecture, reliability, and production issue resolution.
- Improved system stability through debugging, performance optimization, structured logging, and Nginx HTTPS deployment.

Computer Technician & E-Commerce Admin — GameStorm

2022 – 2024

- Built custom PCs end-to-end (spec, assembly, OS, QA), administered Windows environments, diagnosed hardware/software issues for clients, and managed e-commerce operations (listings, orders, inventory, support).

FEATURED PROJECT

AI-Powered Composable Commerce Platform

Solo project · Live on Vercel

TypeScript 5.9 (strict) · Next.js 16 · React 19 · Supabase (PostgreSQL + RLS) · Stripe · Claude API

- Shipped a production e-commerce platform (~194 TS files) with SSR storefront, full admin panel, and Stripe-powered checkout — backed by 11 PostgreSQL migrations with Row-Level Security.
- Designed a database-driven CMS with a drag-and-drop page builder (9 section types), live preview, undo/redo, and a draft/publish workflow.
- Integrated Stripe via a pluggable provider pattern, enabling seamless mock/production switching with zero code changes.
- Built an AI content assistant (Claude API) returning structured action cards with confidence scoring and admin approval before execution.
- Prevented overselling with a stock-reservation pattern backed by cron-based cleanup of abandoned checkouts.

EDUCATION

B.Sc. in Computer Science — HIT (Holon Institute of Technology)

Expected July 2026

GPA: 86 / 100 (≈ 3.4 / 4.0) · **Selected coursework:** Deep Learning, Cloud & Serverless (AWS), Async Server-Side Dev, Human-AI Interaction, OOP with .NET/C#, Data Structures & Algorithms, Computability & Complexity, OS, Databases, Networks.

MILITARY SERVICE & LANGUAGES

Combat Soldier — Israel Defense Forces (IDF)

2019 – 2021

Languages: Hebrew (Native) · English (Professional working proficiency)
