portfolio-roy-vivante.vercel.app/

Junior Software Engineer with production experience in backend and full-stack development. Built RESTful APIs with Django REST Framework (JWT, RBAC, PostgreSQL) for a medical research platform, and independently developed and deployed an AI-powered e-commerce platform with Stripe payments, CMS, and 11 database migrations. Strong ownership, clean architecture, and a bias toward shipping.

TECHNICAL SKILLS

Backend: Python, Django REST Framework, .NET, C#, REST APIs, JWT, PostgreSQL, SQL
Frontend: TypeScript, React, Next.js (SSR/Server Actions), Zustand, Tailwind CSS, Zod
Cloud & DevOps: AWS (SES), Supabase, Vercel, Nginx, Docker, Git, CI/CD
Architecture: System Design, RBAC, Row-Level Security, API Documentation (OpenAPI), Microservices Patterns

PROJECTS

Backend Developer – ShebaHub

Medical Research Platform

Technologies: Python, Django REST Framework, PostgreSQL, AWS SES, JWT, Nginx

- Built RESTful APIs serving three user roles (students, mentors, admins) with JWT authentication, email verification, and brute-force lockout protection
- Designed and enforced granular RBAC with custom permission classes (IsStudent, IsMentor, IsAdmin, IsOwner) across all API endpoints
- Architected a centralized email service (AWS SES) handling 6 notification flows: verification, password reset, approvals, rejections, messages, and invitations
- Modeled PostgreSQL schemas with custom User model, one-to-one profile relationships, and atomic transactions for data consistency
- Implemented file upload security with type/size validation and ClamAV virus scanning to protect against malicious uploads
- Shipped API rate limiting, structured audit logging, auto-generated OpenAPI docs (Swagger/ReDoc), and Nginx deployment with HTTPS

AI-Powered Composable Commerce Platform

Live on Vercel

Technologies: TypeScript 5.9 (strict), Next.js 16, React 19, Supabase (PostgreSQL + RLS), Stripe, Claude AI

- Shipped a production e-commerce platform (~194 TypeScript files) with SSR storefront, full admin panel, and Stripe-powered checkout
- Designed a database-driven CMS with drag-and-drop page builder (9 section types), live preview, undo/redo, and draft/publish workflow
- Integrated Stripe payments via a pluggable provider pattern, enabling seamless mock/production switching with zero code changes
- Built an AI content assistant (Claude API) that returns structured action cards with confidence scoring and requires admin approval before execution
- Prevented overselling with a stock reservation pattern using cron-based cleanup for abandoned checkouts
- Designed 11 PostgreSQL migrations with Row-Level Security covering products, orders, customers, vehicles, CMS content, and audit logs

WORK EXPERIENCE

Computer Technician & E-Commerce Admin – GameStorm

2022–2024

- Built custom PCs end-to-end (spec, assembly, OS, QA) and administered Windows environments across customer systems
- Managed e-commerce operations (listings, orders, inventory) and resolved technical issues for clients

EDUCATION

B.Sc. in Computer Science – HIT (Holon Institute of Technology)

Expected July 2026

GPA: 86

MILITARY SERVICE

Combat Soldier – Israel Defense Forces (IDF)

2019–2021

LANGUAGES

Hebrew (Native) · English (High proficiency)
